

## Sprint Review 5

- Features implemented

In this sprint we created a new document for our UML class diagrams. We also started a few more tasks which are shown on our sprint backlog. These tasks included adding to entries and editing the profile for users of the application.

- Issues fixed

We didn't fix any issues during the sprint but we planned how we would fix the issues with our deliverable 4. This included updating our kanban board and fixing some diagrams.

- Implementation review (*What went well in the implementation, what problems occurred, how problems were solved*)

Creating the new document went well. Knowledge acquisition for the new tasks also went well. There were no problems during this deliverable.

- Changes made.

We made changes to the kanban board. We also made changes to the sprint and product backlogs.

- Plans for next sprint (*What will be done for the next sprint*)

Our plans for the next sprint is to continue working on adding tasks to our application so that we can have more functionalities for our application.

- Scrum Review (*What went well in Scrum, what could be improved, and what changes will be made*)

This scrum went well. We were able to make more progress on our application and we were able to make a plan for going forward. The product owner for this scrum was Finn Jacobs and the scrum master was Brody Looney. Elijah Story and Callie Samson were a part of the development team during this scrum.
