Project Description

Group Name: Wombat Workshop
Group Members: Brody Looney, Callie Samson, Elijah Story, Finn Jacobs, Hunter McDaniels-Rossiter
App Name: Dream Catcher

App Description:

Our app will provide a user with a way to organize all the bucket list items they might have in their life. The user will be able to create different categories for events they want to accomplish. For each event, a user will be able to provide information about that event like; name of event, description, image, priority, and deadline. The user will be able to change the status of different events based on if the event is in progress or has been completed. Users will be able to share their lists with friends and add events from shared lists to your own lists. Users will be able to make collaborative lists with friends and fill these lists with events they want to do together. Users will be able check statistics on their events like how long an event took to complete, how many events are in progress, or how many events they have completed in total.

Similar Apps:

- Bucket List Maker: Check Marks

  Bucket List Maker: Check Marks is an IOS/Android app with the main feature being the app's pre-made lists. The lists are put in various categories such as food, movies, and books. However the majority of these pre-made lists are locked behind a subscription paywall. The app also allows you to create your own bucket lists. The profile page has a "life progress" percent tracker which follows the amount of things you have crossed off the bucket lists.

  One difference is our app has no pre-made bucket lists. Another difference is the ability to share lists with other users and work on them together.

- Bucket: A Bucket List App

  Bucket is a social media bucket list application. Users can make bucket lists that are filled with "buckets" and these lists can be shared to other users. Bucket is focused on the community within the application and the main goal is to promote authenticity instead of being focused on likes and followers. Users can visit the explore page to find inspiration from other users and they can also list their goals on their homepage for others to see. This application differs from other social media platforms because it connects users through future experiences instead of past experiences.

  The main difference between this application and the application that we are creating is that our application has the option for sharing lists but it is not required. The application that we are creating is not exclusively a social network but does have

features of a social media application. Our application can be used personally and connections with other people are not required.

- iBucket: Bucket List

    iBucket is a bucket list app that seems to be centered around travel. You can make lists and add goals to these lists like we were planning to do. Because it's focused on travel, there is a map that will have a pin at all the places on your list. There is also a feature so you can track how many countries you have visited. You can also see other users and their lists like we had planned to do with our app.

    One of the differences we will have on our app is a system to keep the user engaged with their goals. We don't want the user to make a list or goal then forget about it and we want to reward the user for completing a goal.

- MY BUCKET LIST 100

- iWish - Life Goals, Wishlist, Bucket List

User Story Document

- As a user I want to be able to create separate folders within the application so that I can put certain events/plans in specific categories

- As a user I would like to have a username and password for my application so that my information within the application is secure.

- As a user I want to be able to check off entries in my bucket list and have them imported to a separate folder so that I can see what I have already completed within the bucket-list.

- As a user I want to be able to have the option to share my bucket list with friends and other users of the application so that they can see my list.

- As a user I want to be able to delete entries from my bucket list so that I only see entries that resonate with me.

- As a user I want to be able to have the option to attach a picture with my entries so that I can have a visual representation of my entry.

- As a user I want to be able to sort my entries based on priority so that I know which entries I would like to complete first.

- As a user I want to be able to see the number of active entries in the bucket list so that I can see how many entries there are for me to complete.

- As a user I want to be able to see the number of completed entries in the bucket list so that I can track my progress.

- As a user I want to see popular entries from other users so that I can add these to my bucket list if I desire.

- As a user I want the ability to set up a collaborative bucket list so that my friends or significant other can add things we wish to do together.

- As a user I want to review how long it took me to complete the entry from the time I add it to when I check it off.

- As a user I want to be able to connect my account to other social media so that I can share my completed entries to other media platforms.

- As a user I want to be able to set a profile picture so that I can stand out from other users.

- As a user I want to be able to change privacy settings on my account so that I can change what entries are visible to everyone/friends/only me.

- As a user I want to be able to add a deadline to an entry so that I am motivated to complete the task.
