Sprint Review 6

- <u>Features implemented</u>

We implemented the feature to delete an item from a bucket. We also discussed how we were going to implement the testing for our application. Lastly, we discussed how we were going to create our final presentation.

- <u>Issues fixed</u>

We fixed the errors that we had from the last deliverable. This included adding a description to our DCD to provide some clarification for the classes that were included in the diagram. It also included updating the backlogs to match the progress that has been made with our application.

- <u>Implementation review</u> *(What went well in the implementation, what problems occurred, how problems were solved)*

Implementing the delete feature went very well and the feature is functioning as it should. We have had a couple problems with the testing of our application but we have been working through these problems.

- <u>Changes made.</u>

We changed the backlogs and added to the DCD. We did not have other problems than those so we did not make any changes beyond those.

- <u>Plans for next sprint</u> *(What will be done for the next sprint)*

This is our last sprint for this project but we created a document for the plan for the future of this application which includes everything that still needs to be done.

- <u>Scrum Review</u> *(What went well in Scrum, what could be improved, and what changes will be made)*

This scrum went very well. We were able to address the problems that we had with our last deliverable and we were able to solve them efficiently. We also were able to create a plan to finish out this project. The product owner for this scrum was Brody Looney and the scrum master was Elijah Story. Finn Jacobs and Callie Samson were a part of the development team during this scrum.
