Sprint Review 4

● Features implemented

In this sprint we created a new document for our domain model. We also finished the basic functionality of the application. A user can now sign-up, login, create a bucket, and add items to that bucket.

● Issues fixed

We fixed the problems from deliverable 3. This included updating both the product and sprint backlog, updating the use case document, and fixing the sequence diagram document.

● Implementation review *(What went well in the implementation, what problems occurred, how problems were solved)*

The fixing of the issues went well. Updating the documents was not difficult and it did not take too long. There was some confusion with the domain model diagram but after reviewing class notes and the example domain model we were able to create our own.

● Changes made.

We made changes to both of the backlogs, the use case document, and the sequence diagram document. These changes were needed due to the feedback from deliverable 3.

● Plans for next sprint *(What will be done for the next sprint)*

Our plans for the next sprint is to add some more functionalities to the item management system. Adding deadlines is an issue that we hope to tackle in the next sprint as well as adding images to an item.

● Scrum Review *(What went well in Scrum, what could be improved, and what changes will be made)*

This scrum went very well, we were able to fix all of the issues from the last deliverable. We were also able to get a very basic version of the application working which was great. The scrum master for this scrum was Finn Jacobs and the product owner was Callie Samson.
